MyCodeBot

MyCodeBot is an facebook messenger chat bot, which is made back in 2016 by a DTU 2015-2019 student named Nikhil. This chat bot is not working at this time in 2022.

This Chatbot has some drawbacks like :-

1- Multiple Commands for just one line of code.

2- No ChatRooms

3- Not Availible for Multiple Devices.

4- Dependent on Messenger

How we are Different?

- Chat Room Feature.
- No Dependency.
- No Account Needed.
- Single Click Code Compilation.
- Easy to Find
- Available on Any Device.

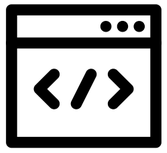
Our Features

Coder Community

One Click Execution

All Devices

Dark/Light Mode



Any Language

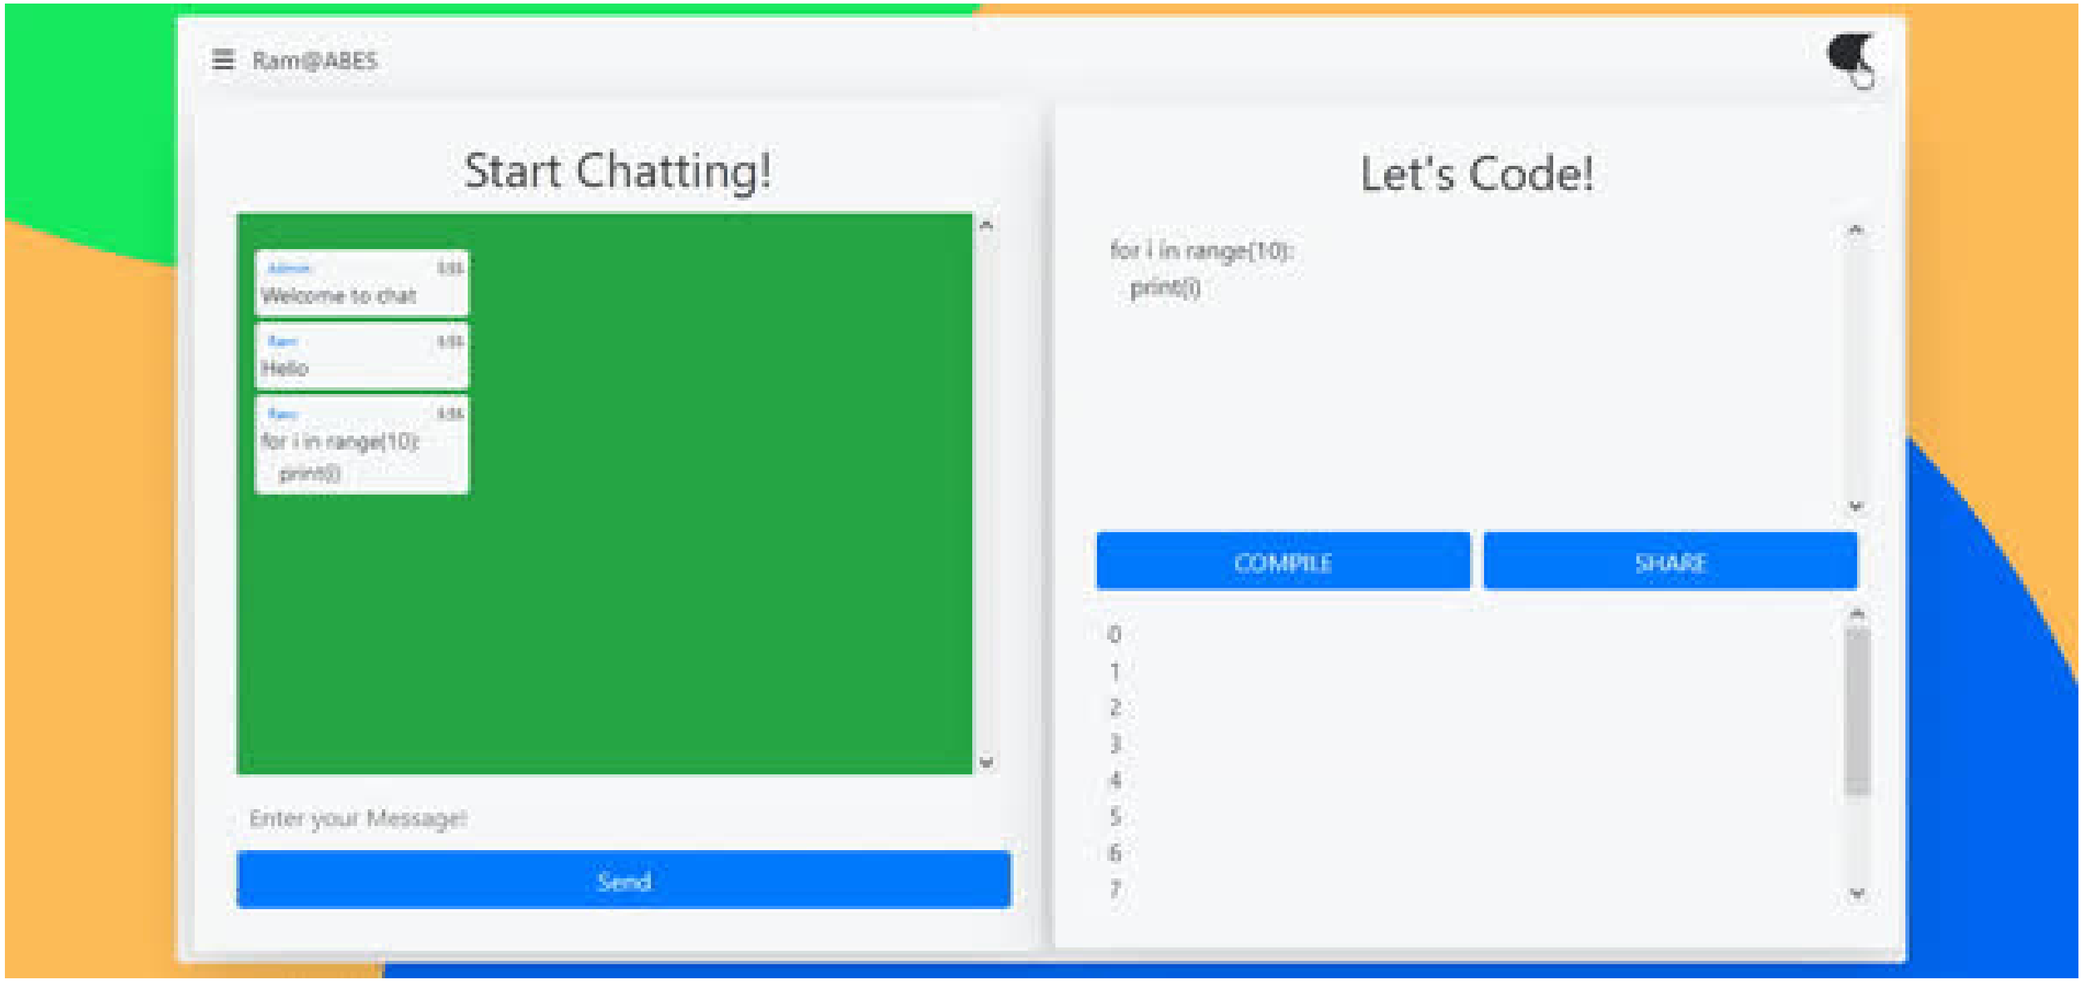
Send
Let's Code!
print("Hello") # Write Python Code
COMPILE
SHARE
Output

(Dark/Light Mode)



Learnings to Developer

- Asynchronous Client to Server Messaging.
- API Calling from Server.
- Processing Data on Backend.
- Updating Features in Apps.
- Updating Features in Apps.

Future Goals

- We'll be adding a assesment feature.
- We are also thinking about converting it into an android application.
- UI updates and user experience improvements.
- Bug fixes through users feedback.
